Building cost cards

Print on A4 paper at Actual size, 100% scale. Do not use “fit to page”.

Each card trims to 90 × 128 mm. The sheet has a 3 mm bleed and crop marks. Cut on the crop marks, not on the outer edge of the colour.

The duplex file is two pages. Page 1 is the four fronts: Red (circle), Blue (square), Green (triangle), Gold (diamond). Page 2 is the four backs, already mirrored left to right.

For double-sided printing, flip on the long edge. After that flip, each coloured back should sit on the front with the same name and symbol. This alignment has not been checked on a physical printer. Hold the sheet to a window before you cut a whole set.

Single-sided alternative: print the fronts file and the backs file on two sheets. Cut the eight cards apart and glue each back to the front with the same player name and symbol. Do not glue the sheets corner to corner without flipping them — the backs file is arranged for a long-edge flip, so an unflipped stack pairs Red with Blue.

A short alignment test: print only the duplex file’s first page, draw a pencil cross in the margin, flip the paper on the long edge, and print page 2. The crop marks should meet. If your printer shifts them, use the single-sided method.

Cardstock around 250–300 gsm is a practical choice for a hand of cards. That weight is a suggestion, not a tested specification. The low-ink file is the same duplex pair on a white ground, with the same pictures.

Costs are the pictures, read from the Version 1 rules. The footer is the action. Steel is marked Trade because it is not an action. Unresolved rules are not printed on these cards. They stay in the rulebook.

These sheets do not replace the Steel Cards or the other reference sheets.

No physical paper test was made for this file.
